

■ Capabilities ■ Assist App

Assist App

The **Assist App** is an end-user-facing chat interface that provides conversational access to AI agents built on the Trimble Agentic AI Platform. It offers a seamless experience for interacting with agents through natural language.

Deployment Options

Standalone Application

Access Assist as a full web application:

- **Production:** <https://assist.ai.trimble.com>
- **Staging:** <https://assist.stage.trimble-ai.com>

Embeddable Version

Embed the Trimble Assist UI directly in your applications:

- Embed the chat interface within your web application
- Maintain consistent branding and user experience
- Seamless authentication and agent access
- Start with Framework Components (recommended for most teams)
- Use Direct iFrame Integration for advanced custom requirements

Key Features

Agent Discovery

- Browse and access available agents
- View agent descriptions and capabilities
- Quick access to recently used agents

- Sample prompts to get started quickly

Conversational Interface

- Natural language chat with AI agents
- Rich message formatting and responses
- Context-aware conversations with history
- Model selection for flexible inference options

Conversation Management

- Automatic conversation history
- Search through past conversations
- Resume previous conversations
- Organize and manage chat threads

Multi-Agent Support

- Switch between different agents seamlessly
- Access specialized agents for different tasks
- Share conversations across agents (when configured)

User Experience

The Assist App is designed for end users who need to:

- Get instant answers and assistance from AI agents
- Access domain-specific knowledge and tools
- Complete tasks through conversational AI
- Leverage multiple specialized agents in their workflow

Authentication is handled via Trimble Identity, ensuring secure access to agents based on configured permissions.
